

## Kitten Wellness Program

Our kitten wellness program is designed to offer your new kitten a series of checkups from 6 weeks of age to 12 weeks of age in order to maintain proper health. Included in this service is a series of examinations and vaccinations including Rabies, Panleukopenia (feline distemper), Calici, Leukemia, etc. In addition, your kitten will be tested for intestinal worms and treated for the most common intestinal worms— roundworms. Roundworms can cause diarrhea and vomiting; however, it is possible for your kitten to have roundworms and not show any signs. A microscopic fecal examination will allow us to evaluate the presence of these worms and others. The examination will also look for other types of parasites that can affect your kitten.
